

Round Ceiling Speakers

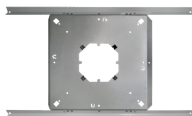

Valcom's Round Ceiling Speaker provides exceptional voice and music quality for a variety of environments. The speaker is available as an analog or IP, and in one-way or talkback configurations. Round Ceiling speakers are ideal for public buildings, healthcare and educational facilities, offices, banks, shopping areas, motels/hotels, distribution centers, transportation terminals and locations that require both voice paging and background music. The discreet volume control for analog speakers is designed to be tamper resistant. The IP version enables live, prerecorded, or ad hoc audio messages to be broadcast across multiple locations.
