## About

The **WilsonPro 1000** passive distributed antenna system is a cellular amplifier designed to provide enhanced in-building cellular coverage for all commercial spaces, including hospitals, hotels, warehouses and offices.

The WilsonPro 1000 amplifies weak cellular signals to provide reliable voice and data coverage—including 4G – to inside spaces where signals may not penetrate and With new eXtended Dynamic Range (XDR) technology, the amplifier never shuts off due to a strong outside signal or changes in outside signals.

Like all WilsonPro cellular amplifiers, the WilsonPro 1000 features cell site protections that auto-detect and prevent any cell tower interference.
